Projects

- Simple ToDo app in Vue and Firebase: <https://github.com/MohannedM/Dolt-vue-project->
- Simple Budget Calculator App In Es6,7,8 modules with Cairo weather Api <https://github.com/MohannedM/enterprise-cairo-budget-app-cairo>
- A full registration system in Native PHP using functional programming pattern <https://github.com/MohannedM/Regi-app>
- A simple MVC PHP framework built from scratch <https://github.com/MohannedM/MoVCode>
- A simple social app built on my MVC framework (MoVCode) <https://github.com/MohannedM/MoBook>
- A business social network and todo scheduling built on Laravel <https://github.com/MohannedM/BizWorks>
- A contact manager App for users built with Laravel and Vue to use the built API to make the CRUD functionality for each authenticated user <https://github.com/MohannedM/MyContacts>
- Note: All above projects I have built on my own using the knowledge I gained through the course of learning. Furthermore, I have other projects that I built but with the help and/or the imitation of an instructor or a programming course I took. So, I didn't want to present those projects for credibility.
